**TO DEFEAT DIABETES, EDUCATE MORE  
AND MEDICATE LESS**

**CUT  
CARBOHYDRATES**

**ADD GOOD FATS  
AND PROTEINS**

**THROW AWAY SUGARS,  
GRAINS &  
HEAVILY-PROCESSED  
VEGETABLE OILS**

**TO BEGIN THE JOURNEY OF  
DIABETIC REMISSION**

**Name:** \_\_\_\_\_

**MR No:** \_\_\_\_\_

Narayana Nethralaya's Reversing Diabetes Clinic is one-of-a-kind initiative by NN with a primary goal of bringing healthy lifestyle changes through personalized diet plan or reduced medications for patients with diabetes.

Our Reversing Diabetes Clinic consist a team of highly skilled experts including doctors, dieticians and counsellors with adequate knowledge in the field of medicine, along with a state-of-the-art laboratory for all your tests under one roof.

Professional and personalized guidance along with periodic visits and gradual withdrawal of medicines over a period of 6-12 months with our experts ensures best results based on the patient's medical history.

## 'Low Carbohydrates and Healthy Fats' food habits

### I am a diabetic for several years – is this diet suitable for me?

Yes, it is suitable. You will need to make modifications to your routine and get adapted to it. You will see good results if you follow to the suggested plan.

### Will the diet help with weight loss and improve my blood pressure levels?

Yes, these are the two of the main benefits of this diet. There will be a reduced dependence on medication, improvements in insulin sensitivity, lower blood pressure and improvement in good cholesterol levels, besides others. If you are on medication, you will need to speak to our doctor, who will be able to advise you on what precautions to take to reduce the risk of hypoglycaemia.

### Can I practice intermittent fasting on keto?

Yes, you can. It is a very useful tool to boost fat burning. However, you should get keto-adapted first before attempting it.

### What are the other health benefits of this diet?

Early studies have now shown that the diet can have benefits for a wide variety of different health conditions:

- Heart disease
- Cancer
- Alzheimer's disease
- Epilepsy
- Parkinson's disease
- Polycystic ovary syndrome
- Arthritis
- Allergies
- Migrane
- Infertility

### What does the new food habits of low carb–healthy fats entail?

This is a very–low carb, moderate protein and high healthy fat diet. It typically contains 70 to 75 percent fat, 20 percent protein, and about 5 to 10 percent carbs. In terms of grams per day, it would be:

- 20–50g of carbohydrate
- 60–80g of protein
- No set limit for good fat

Fats in the diet provide the majority of calories and no limit is set as energy requirements can vary significantly from person to person. Good intake of non–starchy vegetables are preferred as these are very low in carbohydrate.

### Do I need to count or restrict calories?

No, a low carb–healthy fat diet can be eaten to satiety.

## What are the foods to avoid?

Any food that is high in carbs should be limited

- Grains or starches: rice, wheat, cereals
- Fruit: most fruits except small portions of berries
- Root vegetables: potatoes, sweet potatoes
- Sugary foods: soda, fruit juice, smoothies, cake, ice cream, chocolates
- Unhealthy fats: processed vegetable oils, margarine
- Sugar-free diet foods: sugar-free candies, sweeteners, desserts

## What kind of foods am I allowed to eat?

You should base the majority of your meals around these foods:

- Meat: chicken, red meat, pork
- Fatty fish: salmon, trout, tuna, and mackerel
- Eggs: pastured or omega-3 whole eggs  
Butter and cream: grass-fed butter and heavy cream
- Cheese: unprocessed cheeses like cheddar, goat, cream, blue, or mozzarella
- Nuts and seeds: almonds, walnuts, flaxseeds, pumpkinseeds, chia seeds
- Avocados: whole avocados or freshly made guacamole
- Healthy oils: extra virgin olive oil, coconut oil, and avocado oil
- Low carb veggies: green veggies, tomatoes, onions, capsicum

## I'm physically active, can I still do a low carb-healthy fat diet?

You may need to reduce your workout intensity or not engage in anything that demands a lot of glucose while you try to get fat-adapted. Carb re-feed days can be helpful for active people who might need carbs around the time of their workout.

## What is the "keto flu" and how can I avoid it?

Your body has always relied on glucose as its primary source of energy. Therefore, when you cut or reduce carbohydrates drastically, the body's metabolism has to resort to burning fat for energy. This period of adaptation, which can take up to 4 weeks, can cause symptoms similar to flu like mild weakness or lack of energy. Changes in bowel habits, leg cramps and bad breath are other symptoms. This state is temporary and keeping yourself well hydrated should help.

## How long does it take to get adapted to this diet?

With a low carb diet, your body will need to transit from burning glucose to using your body's fat as fuel. It will take a few days or weeks to get used to it. You may experience some gastrointestinal symptoms of carbohydrate withdrawal at first, but once you become fat-adapted, it will be much easier.

## Are some tips and tricks to make it easier?

Although it can be challenging, the below measures can make it easier

- Look at food labels and check the grams of fat, carbs, and fiber to determine how if they can fit into your diet.
- Many websites, food blogs, apps, and cookbooks also offer recipes and meal ideas that you can use to build your own custom menu
- Some meal delivery services even offer keto-friendly options for a quick and convenient way to enjoy keto meals at home.
- When going to social gatherings or visiting family and friends, you can consider taking your own food, which can make it much easier to curb cravings and stick to your meal plan.

# A FAT LOT OF GOOD

## GREEN ZONE: EAT PLENTY

### Drinks

Green Tea | Green Coffee | Herbal Tea | Bone Broth | Infused Water | Sugarless Coffee and Tea

### Nuts

Almonds | Walnuts | Brazil Nuts | Pecans | Pine Nuts

### Seeds

Flax Seeds | Chia Seeds | Pumpkin Seeds | Sunflower Seeds | Sesame Seeds | Basil Seeds | Melon Seeds

### Dairy

Cream | Butter | Cheese | Cottage Cheese | Yogurt | Curd | Ghee | Full Fat Milk

### Non-dairy alts

Coconut Milk/Cream | Nut Butters | Almond Milk | Soy Milk

### Oils (Cold Pressed Oils)

Coconut Oil | Olive Oil | Ground Nut Oil | Canola Oil | Mustard Oil

### Flour

Almond Flour | Coconut Flour | Keto Flour

### Sauces

Mayonnaise | Mustard | Chutney

### Sweet suppliments

Stevia | Erythritol

### Vegetables

Cabbage | Cauliflower | Broccoli | Asparagus | Zucchini | Brussel Sprouts | Egg Plant | Olives | Spinach | Mushrooms | Cucumber | Lettuce | Onions | Capsicums | Tomatoes | Green Leafy Vegetables | Lady's Finger

### Fruits

Avocado | Berries (Strawberries, Raspberries, Goose berries, Blueberries) | Wood Apple | Palm Fruit | Lime | Amla | Star Fruit | Jamun Fruit

### Non-veg

Egg | Fish | Chicken | Lamb | Pork | Crab | Shrimp | Prawns | Oysters

### Others

Spices | Herbs | Pickles

## RED ZONE: AVOID

### Drinks

Fruit Juices | Sports Drinks | Energy Drinks | Flavoured Milks | Colas | Liquor | Carbonated Beverages

### Grains

Cereals | Millets | Oats | Rice Cakes | Quinoa | Noodles | Muffins | Muesli & Muesli Bars | Pasta | Energy Bars | Semolina | Rice & Rice products | Millet & Millet products | Wheat & Wheat products | Ragi & Ragi products

### Fruits

Mango | Pine Apple | Banana | Oranges | Grapes | Dry Fruits

### Meats

Highly Processed | Nuggets | Hot Dogs

### Sugar

Soft Drinks | Chocolates | Ice Cream | Pies | Pastries

### Others

Flavoured Yogurt | Frozen Yogurt | Artificial Sweeteners | Anything Deep-Fried

### Bakery

Bread | Buns | Biscuits | Cakes

### Processed Vegetable Oils

Sunflower oil | Groundnut oil | Dalda | Palm oil

Food item	Glycemic index	Serve size g	How does each food affect blood glucose compared with one 4gm teaspoon of table sugar?
 Basmati rice	69	150	10.1 
 Potato, white boiled	96	150	9.1 
 French fries baked	64	150	7.5 
 Spaghetti white boiled	39	180	6.6 
 Sweet corn boiled	60	80	4.0 
 Frozen peas, boiled	51	80	1.3 
 Banana	62	120	5.7 
 Apple	39	120	2.3 
 Wholemeal small slice	74	30	3.0 
 Broccoli	15	80	0.2 
 Eggs	0	60	0 

Other foods in the very low glycemic range would be chicken, oily fish, almonds, mushrooms, cheese

# WEIGHT LOSS PROGRAMME

## ALL YOU NEED TO WEIGH RIGHT IS A RIGHT DIET

### BODY MASS INDEX (BMI) What is your BMI range?

### BODY COMPOSITION

Body composition refers to the percentage of fat, muscle and bone in the body. It is crucial to maintain a healthy body composition besides healthy body weight.

There are 2 types of fats - Subcutaneous and visceral. Subcutaneous fat is the jiggly fat visible just under the skin. Visceral fat is the one that lies out of reach beneath the abdominal wall and surrounds the internal organs.

### Body Fat Composition Analysis

## COMPLICATIONS

Overweight/ obesity/ excess body fat composition in the body may lead to several health complications like diabetes, hypertension, cardiovascular diseases, liver diseases, gallbladder diseases, thyroid, osteoporosis, PCOS, cancer and so on.

## LOW CARB HEALTHY FAT DIET

Cutting down carbohydrates and increasing good fats with adequate amount of protein in the diet is helpful in achieving healthy body weight and composition.

Foods to be restricted – Cereals, millets, lentils, tuberous vegetables, sugary fruits, dry fruits, milk, refined oils, all kinds of sweeteners, juices, carbonated beverages, junk foods, alcohol.

Foods to be taken – Tofu, leafy vegetables, vegetables which grow above the ground, fruits with low sugar content, mushroom, almond, walnut, chia seeds, flax seeds, melon seeds, sunflower seeds, pumpkin seeds, curd, yoghurt, paneer, cheese, butter, cream, ghee, cold pressed oils, coconut, eggs, fish, chicken, limited amounts of red meat.

## WEIGHT LOSS JOURNEY

Reaching weight goals depends on about 80% dietary habits and 20% physical activity. Weight loss progression varies from person to person. It depends on an individual's body type, genetics, family history, physiological state, psychological condition, sleep pattern, physical activity and so on. One needs to be patient and show a positive attitude towards the journey since the results are not spontaneous but gradual.
